Streamline actions in Salesforce with custom buttons & links!

By creating custom buttons and links, we can streamline actions within your Salesforce or integrate Salesforce data with external URLs, applications, or systems – to suit your business needs. Maybe you want a link between two separate objects or something as complicated as pre-populating a lot of fields on a new record on a different object. A custom button can also be a one-click solution for executing a Google search (example link below), searching a contact/account name through social networking sites (example button below), or even opening a send email form with pre-populated fields. For more comprehensive insight on custom buttons and links, reach out to one of our consultants today. For more information on this & other great ways to personalize your Salesforce, visit us at www.highfillservices.com/contact.html; or email directly at: info@highfillservices.com
