

# Save time & automate your basic business processes through Salesforce!

By using the Process Builder tool within your Salesforce instance, we can help automate all of your workflow actions & business processes. Some of the automation features include: creating new items based off certain criteria – such as creating new records, creating new chatter feeds & pushing to a specific group or feed, creating approval process, as well as consolidating individual workflows into one process. Once we understand your business process, we can begin to formulate criteria for the process. After the criteria is in place, we will begin to add actions (such as creating a new record or assigning a specific owner) to execute/trigger once those criteria are met. For more information on this & other great ways to personalize your Salesforce, reach out to us at [www.highfillservices.com/contact.html](http://www.highfillservices.com/contact.html)
